Abstract of EP0417831

Condensed diazepinones of the general formula I in which is one of the divalent radicals X is a -CH₂ group or a nitrogen atom, R is a lower alkyl radical which can optionally also be substituted by a phenyl which optionally carries halogen, methyl or methoxy, R<4> and R<5> are hydrogen, halogen or lower alkyl, R<6> is hydrogen, chlorine or methyl, R<7> and R<8> are lower alkyl, R<8> is additionally also halogen, and m, n, o and p are the numbers 1 or 2, where the total of m + n + o + p must be equal to or less than 6, are suitable for the therapy of cholinergically related spasms and modify disturbances in the gastrointestinal tract, in the biliary tract, for the symptomatic therapy of cystitis and of spasms associated with urolithiasis, for the therapy of relative incontinence, for the symptomatic therapy of bronchial asthma and of brachitis, and for the therapy of ischaemic heart diseases. The compounds are distinguished by high selectivity.
